

IMPROVE™

Premium Concentrated Nonionic Surfactant

IMPROVE is a highly concentrated, premium, nonionic surfactant (NIS) that has proven to be a top performer in years of research and field trials. **IMPROVE** has excellent physical and chemical properties that allow for maximum uptake of herbicides, other pesticides, and biologicals. It keeps the spray deposit moist over an extended time to increase uptake.

IMPROVE also contains an effective defoamer and antifoam.

Use **IMPROVE** at rates of 0.5 to 2 qt/100 gal or 0.125 to 5% of the spray volume. Higher rates improve control on tough weeds under adverse environmental conditions.

FEATURES & BENEFITS:

- **ENHANCES** pesticide performance by improving penetration through the cuticle allowing faster, more efficient uptake into the plant. (see image below)
- **CONCENTRATED** and very effective
- **PROVIDES** superior rewetting after the spray deposit dries. This characteristic allows for greater and longer pesticide uptake.
- **DOES NOT** contain isopropyl alcohol or fatty acids as "active" ingredients
- **INCLUDES** an effective, silicon-based defoaming system that keeps most spray mixtures foam-free.

IMPROVE™ Gets Results

▲
Fully Loaded Glyphosate
1 pt /acre
(Herbicide Alone)

▲
IMPROVE NIS
2 pt /100 gal
Fully loaded Glyphosate
1 pt /acre

▲
Nationally Recognized 90/10 NIS
2 pt /100 gal
Fully Loaded Glyphosate
1 pt /acre
