

PREVENT™

High Performance Silicone Antifoam/Defoamer

PREVENT is a premium, high-performance, concentrated, silicone, antifoam/defoamer designed to provide efficient and economical control of foam in the spray tank.

PREVENT contains an antifoam to prevent foam formation, and a defoamer to collapse existing foam.

As with all anti-foams/defoamers, the most efficient way to use **PREVENT** is to add to the spray tank before the foam forms. Low rates are very effective at preventing foam. Even a rate as low as 1/8 ounce/100 gal works well when added to the spray water first. Higher rates may be needed with stronger concentrations of products that cause foam. If foam has already formed, a spray mist of **PREVENT** will collapse it.

FEATURES & BENEFITS:

- **POWERFUL** antifoamer and defoamer
- **CONCENTRATED**
- **COST-EFFECTIVE**
- **LOW USE RATE** starting as low as 1/8 ounce/100 gal
- **MOST EFFECTIVE** when added to the spray mixture before foam formation
